Diet after discharge: If you have no underlying disease, you do not need a special diet.				Diet
Dietary restrictions: Your daily diet should include fresh vegetables and fruits, and avoid gas-forming foods.				
Other:				Activity and Rest
Avoid straining and sexual intercourse for 6 weeks. Walking is recommended to prevent constipation.				
Other:				Bathing
One day after discharge, you can shower, remove the dressing, and gently wash around the wound with your hand, water, and soap. Do not rub the wound with a washcloth or sponge. After bathing, dry the stitch area with a hair dryer or a clean, ironed cloth.				
Dressing change time: No need to re-dress the wound.				Wound, Surgical Site
If you wish or as advised by the surgeon, you may place a wound closure strip over the stitches.				

If at home you experience abdominal pain, heavy bleeding, fever and chills, discharge from the wound, swelling in one leg, shortness of breath, chest pain, or any abnormal sign, go to the obstetrics clinic. If the newborn shows abnormal symptoms such as very rapid breathing or stopping breathing, jaundice, lethargy, severe restlessness, cold body, frequent vomiting, abdominal distension, or feeding problems, go immediately to the nearest medical center. Other:.....	Warning Signs
Return to the clinic 1 to 2 weeks after surgery for stitch removal. If you have questions or problems regarding your condition, you can call the Hospital Health Education Clinic daily (except holidays) from 8:00 AM to 12:00 PM at 05132595516 ext. 309. For newborn problems, contact breastfeeding consultation centers. Return to the obstetrics clinic for follow-up 7 to 10 days after delivery. Take the newborn to the health center for a heel prick thyroid test at 3 to 5 days of age. Take the newborn to a pediatrician for examination 24 to 48 hours after discharge. If recommended by the doctor, use elastic stockings and a medical abdominal binder. For appointment information: Call 05132595516. Note that appointments are given in person only, on the day the specialist is present, before 7:00 AM.	Post-Discharge Follow-up
Make sure the umbilical cord is not placed inside the diaper. No disinfection or tying of the umbilical cord is needed. When leaving the ward, go to the nursing station to give the newborn the polio vaccine drop. 3 weeks after the C-section, if engaging in sexual activity, use birth control methods.	Other Educational Items
Dear patient: After reading this form, write down any questions and ask your nurse before leaving the hospital. 1- 2- 3- × If a pathology (biopsy) sample was sent during your hospital stay, the answer code and tracking ID for pathology tests will be written on your discharge summary.
